Bring contractors into your *SAP workflow*.

FastExternals lets you manage contractors from a web portal and distribute SAP work orders with structured reporting back. Contractors report via a mobile app, and you review every submission before it touches SAP.

With FastExternals.

- ✓ Contractors report directly from a mobile app.
- ✓ Work order data flows back to SAP after approval.
- ✓ No SAP accounts needed for contractors.
- ✓ Distribute work to individuals, crews, or companies.
- ✓ Full visibility into contractor progress.

Without FastExternals.

- ✗ Contractor updates arrive by email or phone.
- ✗ Reporting data never makes it back to SAP.
- ✗ Contractors need an SAP account or workaround.
- ✗ No visibility until you chase for an update.
- ✗ Visibility depends on what contractors send you.

What it gives your team.

Contractor management portal: Create and manage contractors from the web portal. No SAP backend setup required.

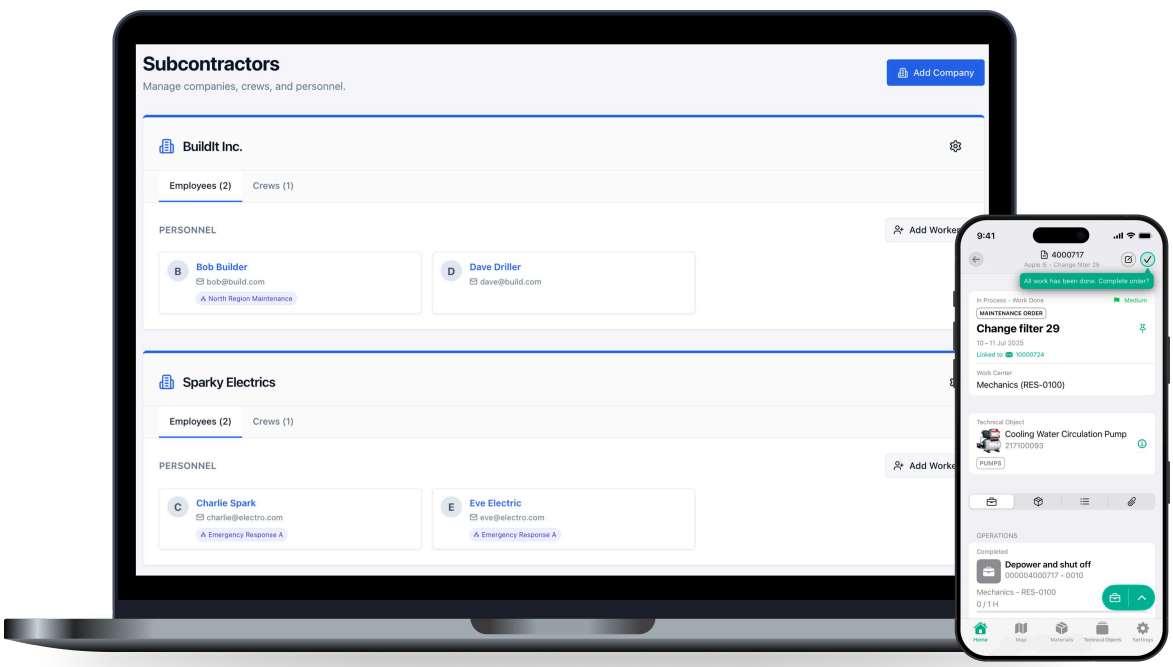
Flexible work distribution: Assign SAP work orders to individual contractors, crews, or companies. Let them distribute work internally.

Purpose-built mobile experience: Contractors report time, materials, photos, and status from a native field app.

Approval before SAP: Review and approve every submission before data is saved to SAP. Your master data stays clean.

No SAP accounts for contractors: Contractors download the app and start working. No SAP accounts, no training, no IT overhead.

Fast go-live: Pre-built SAP PM/CS coverage through FastCloud. Live in weeks, not months.



15%
increase in wrench time.

80%
reduction in admin tasks.
