Planning that keeps up *with reality*.

FastPlan is a visual planning and scheduling tool for SAP maintenance teams that replaces spreadsheets with a live view of workloads, capacity, and schedules. Planners and schedulers work from the same data, and every change syncs back to SAP in seconds.

With FastPlan.

- ✓ A real-time view of workloads and capacity.
- ✓ Move a task and everything adjusts automatically.
- ✓ Changes in FastPlan appear in SAP in seconds.
- ✓ Planners and schedulers share one source of truth.
- ✓ Teams go live in 2 to 6 weeks.

Without FastPlan.

- ✗ Planning data scattered across Excel sheets.
- ✗ Changes mean manual rework across files.
- ✗ Half of every day spent syncing SAP and Excel.
- ✗ Each planner works in their own silo.
- ✗ Rollouts drag on for months or years.

What it gives your team.

Tailored planning views: Each role gets the exact workspace they need to plan, schedule, and assign.

Smart drag-and-drop scheduling: Move a task and hours, resources, and dependent work move with it.

Live capacity overview: See who is available, where bottlenecks are forming, and what you can bring forward.

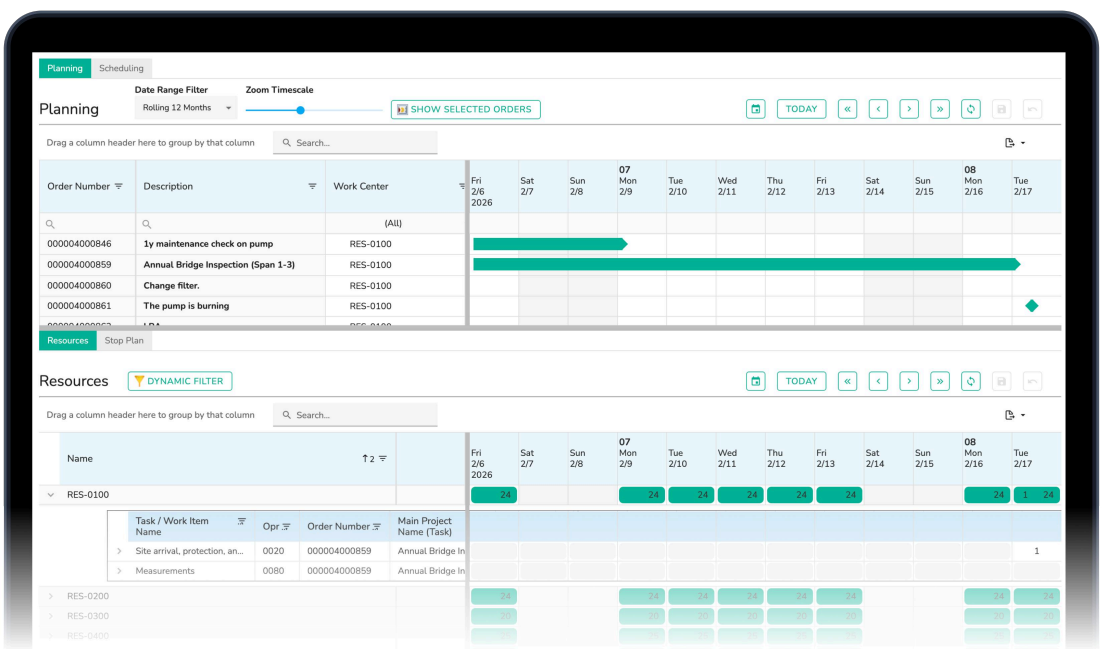
Real-time SAP sync: Changes flow between SAP and FastPlan in seconds. No more double data entry.

More than SAP data: Not all planning data lives in SAP. FastPlan integrates other sources for a full picture.

Actionable planning insights: Track backlog health, schedule compliance, and resource utilization at a glance.

Experiment before you commit: Iterate and adjust plans without affecting SAP. Submit when you're satisfied.

Fast go-live: Pre-built SAP PM/CS coverage through FastCloud. Live in weeks, not months.



15%
increase in wrench time.

80%
reduction in admin tasks.
