FastWork | Mobile work execution for SAP maintenance teams

The fastest path from work order *to done*.

FastWork is a native iOS and Android app that gives technicians everything they need to execute and report on work orders from the field. It works offline, syncs reliably to SAP, stays fast no matter how large your asset base or workforce grows, and is simple enough that your team will actually use it.

With FastWork.

- ✓ Technicians have work details in their hands.
- ✓ Data flows to SAP as work happens.
- ✓ Smooth syncs after connectivity drops.
- ✓ Planners schedule based on up-to-date information.
- ✓ Stays fast as your workforce and asset base scale.
- ✓ Your team uses and gets value out of the app.

Without FastWork.

- ✗ Technicians try to work without the right info.
- ✗ Reporting happens hours or days later.
- ✗ Bad connectivity means lost data.
- ✗ Planners schedule from stale data.
- ✗ Apps struggle as assets and user counts go up.
- ✗ Expensive solutions sit unused, costing money.

What it gives your team.

True offline mode: Access work orders, asset history, and documents without a signal, and sync when you're online.

Rich data capture: Notes, photos, and 3D asset scans from the field using speech-to-text, camera, and LiDAR.

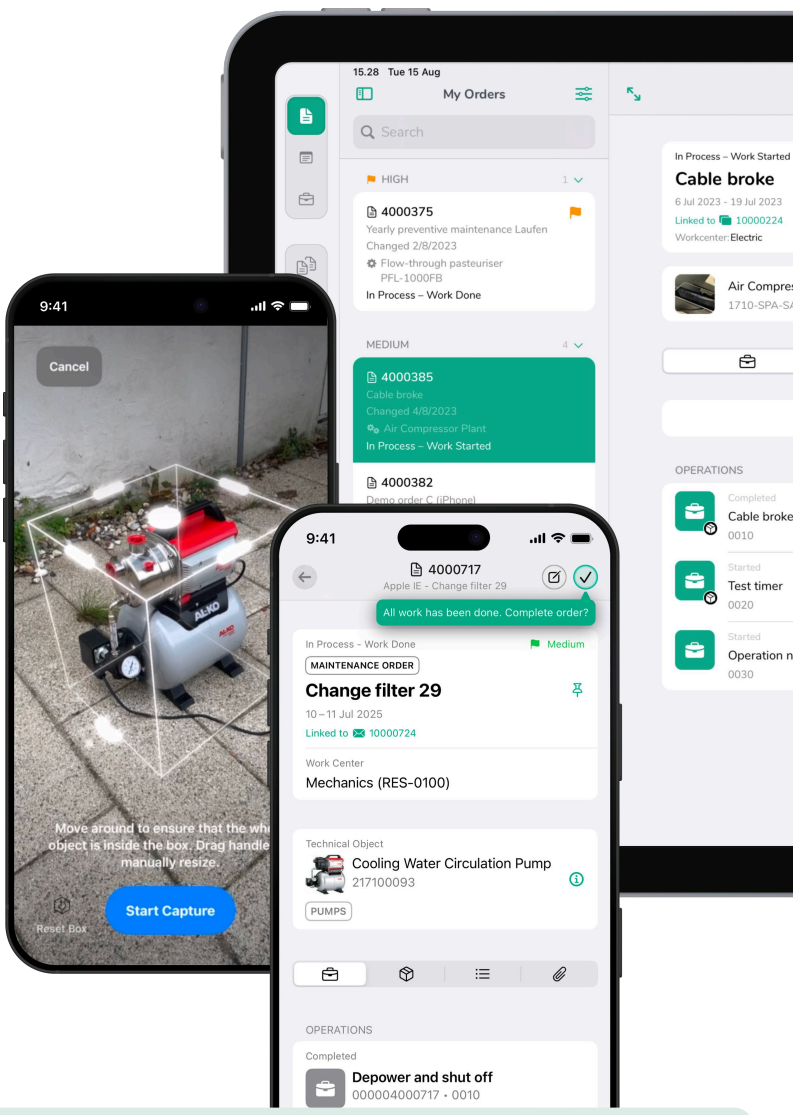
AI-powered search: Find the right instruction, schematic, or part number with chat or a photo to identify any asset.

Full work order processing: Report time, materials, status, and measurements directly from the field.

Native iOS and Android: Built for mobile, not adapted from desktop. Fast, familiar, and designed for field use.

Performance at scale: Stays fast and responsive as you throw more users, assets, and work orders at it.

Safe SAP synchronization: Data reaches SAP reliably through FastCloud, with no lost entries.



"You can pick it up and immediately understand how to navigate and use it. This mobile tool has been very well received by our field service technicians."
