Arkyn FastApp Suite | SAP EAM productivity software

Less admin. Happy users. *More uptime.*

Maintenance teams working out of SAP GUI, paper, and spreadsheets are losing time and visibility every day. Mobile maintenance software exists, but it is complex, slow to implement, and teams stop using it. Arkyn is the SAP EAM productivity suite that maintenance teams love using.

With Arkyn.

- ✓ Issues are reported the moment they are spotted.
- ✓ Technicians have work details in their hands.
- ✓ Planners schedule from live, accurate SAP data.
- ✓ Data flows to SAP as work happens.
- ✓ Go live in weeks. Adoption starts on day one.

Without Arkyn.

- ✗ Issues go unreported or arrive days later.
- ✗ Technicians work without the right information.
- ✗ Planners build schedules on outdated data.
- ✗ Reporting happens after the fact, if at all.
- ✗ SAP mobile tools stall and teams revert to paper.

What Arkyn gives your team.

Consumer-grade apps: Native iOS and Android apps for technicians. Easy to use, just open the app and start.

Visual planning that replaces Excel: Live view of workloads and capacity. Move a task and everything adjusts in SAP.

Issue reporting for anyone: Any employee submits a SAP notification from their phone. Scan, describe, and submit.

No signal, no problem: Works without a signal. Data automatically syncs with SAP when connectivity returns.

Pre-built SAP PM/CS coverage: FastCloud deeply integrates Arkyn and SAP. Quick setup, no sync issues or lost entries.

Arkyn's *FastApp* Suite.
